Safety Policy

The goal of the safety policy is a safe company where the risks to personnel, material capital, environment, and information have been minimised. All employees are required to commit to the safety policy.

The Principles of FORCIT's Safety Policy

- Safety management is a daily and natural part of general management.
- Managers are responsible for implementing safety measures in accordance with the strategic guidelines.
- Safety goals will be met by following the risk control guidelines, in other words by systematically ensuring that all activities are carried out safely under all circumstances.
- Laws and regulations as well as our own guidelines create a basis and a minimum requirement level for our safety policies.
- Critical factors for success include motivation, know-how, resources and management.
